

Design Sprint Day 1
Ryan Wichern

Scenarios:

- Jimmy, is 25 and fresh out of college for Computer Science and struggling to find a job due to the high-demand industry.
- Dylan, 26, working through graduate school and looking for an internship. Very stressed out with life.
- Ronnie, a 21-year-old deli clerk and criminal justice major spending most of his time working and studying. He needs quick access to software that will help him find a better job.
- Mina, 37, returned to college to work towards a different degree in order to obtain a better, higher-paying job.

User Stories:

- Jimmy has been unable to find a job that fits his description and has sufficient pay.
- Dylan wants to gain experience within the industry of his degree but wants flexibility with it.
- Ronnie is constantly busy and needs an easy method in finding a better job.
- With her new degree, Mina wants to find the best option for her so she doesn't have to make drastic career changes in the future again.

Features:

- Allow the ability for users to create profiles that have a high level of description in what they are looking for and have it automatically match them to companies hiring closest to that description.
- Have the option for users to specify how committed they can be to a job experience and what they are looking to get out of it.
- After designing a user profile, jobs should be immediately matched and readily available to any user.
- Show reviews from people that are employed at certain companies and their employee retention rates to ensure commitment.
