

Feature list:

Add a filter that allows a minimum wage so Jhonny can find the job that pays him fairly

Add a feature that allows users to see the jobs that require high degrees and low experience

Make sure the companies have their vision clearly stated in every job application so the job seekers can see it right away

Set the front end to be as easy to use as possible for non-tech savvy users

Feature List

Allow users to filter their job search based on salary, and allow employers to enter a salary range for jobs.

Allow users to filter jobs categorically based on skills they provide and require.

Allow employers to enter specific skills that employees learn and can add to their resumé.

Allow users to filter jobs by level of required experience, but recommend an experience level based on user experience.

Features:

- Allow the ability for users to create profiles that have a high level of description in what they are looking for and have it automatically match them to companies hiring closest to that description.
- Have the option for users to specify how committed they can be to a job experience and what they are looking to get out of it.
- After designing a user profile, jobs should be immediately matched and readily available to any user.
- Show reviews from people that are employed at certain companies and their employee retention rates to ensure commitment.
